EDUCATION

IES College of Technology

Bachelor of Technology – Computer Science

CGPA: 7.55

Bhopal, India

July 2022 – June 2026

Holy Cross School

Senior Secondary (XII)

94.8%

Hazaribagh, India

2021

SKILLS SUMMARY

- **Languages:** C, C++, Python, JavaScript
- **Frameworks & Libraries:** React.js, Node.js, Express.js, Tailwind CSS, Socket.IO, Leaflet.js
- **Core Concepts:** Data Structures, Algorithms, DBMS, OOP, REST API Design
- **Tools:** Git, GitHub, Postman, VS Code, Vercel
- **Databases:** MongoDB, MySQL

PROJECTS

LoanEase – Loan Application & Management System

(React, Node.js, Express, MongoDB, Socket.IO)

GitHub — Live

- Developed a scalable full-stack loan management platform with **30+ source files, 20+ modules, and 3 MongoDB collections**, supporting end-to-end loan lifecycle and KYC workflows.
- Designed and optimized **15+ RESTful APIs** for **scalable system design** using modular controllers and route groups, enabling role-based access for User and Admin operations.
- Implemented **secure authentication (JWT, bcrypt)** with input validation and error handling, ensuring protected routes and backend reliability.
- Integrated **real-time notifications using WebSockets (Socket.IO)** for **event-driven updates**, delivering instant loan status and KYC updates.

SwiftTrack – Real-Time Partner Tracking System

(React, Node.js, Socket.IO, Leaflet, OpenStreetMap)

GitHub — Live

- Engineered a real-time tracking system with **22 source files and 1700 lines of code**, enabling continuous location monitoring using event-driven architecture.
- Built an interactive map-based interface with **live location streaming (10s interval)** and configurable geo-fencing (**1km–10km radius**).
- Developed **WebSocket-based communication (Socket.IO)** for real-time chat, status updates, and persistent messaging.
- Optimized frontend performance with smooth marker animation and efficient state management for dynamic map rendering.

Blogger – User-Based Blogging Platform

(React, Node.js, Express, MongoDB, Redux Toolkit)

- Built a scalable and **high-performance** blogging platform with **7000+ LOC, 12+ REST APIs, and 4 MongoDB models**, supporting content creation and management.
- Implemented **Redux Toolkit-based state management** (Auth, Posts, Comments) for efficient data flow and UI updates across multiple pages.
- Designed secure backend with **authentication, input validation, and rate limiting**, ensuring robust API protection and reliability.
- Applied **modular architecture (Controller-Service-Route pattern)** with features like image upload, email integration, and categorized content delivery.

ACHIEVEMENTS & CERTIFICATIONS

- Solved 200+ problems on LeetCode and GeeksforGeeks
- AWS Certified – Cloud Fundamentals
- Certificate of Participation – Tata Imagination Challenge
